

Water Resources Policy of Shandong Linglong Tyre Co., Ltd.

Shandong Linglong Tyre Co., Ltd. (hereinafter referred to as "Linglong Tire" or "Company"), as a globally responsible enterprise, is fully aware of the problems of freshwater resource scarcity and water pollution, and the severe water resource situation has become an important issue in today's society. Linglong Tire actively assumes the important responsibility of protecting water resources, attaches great importance to water resource management, and promotes the sustainable development and utilization of water resources through the following commitments:

Production:

In the tire production process, the main ways of water consumption are cooling water consumption and steam consumption in the semi-finished product production process and vulcanization process. Linglong Tire will strive to save water and adopt appropriate water resource management to achieve multi use and water recycling. Linglong Tire hopes that the suppliers can comply with this Policy and relevant management.

Innovation:

Linglong Tire invests special funds in the research and development of water-saving technology every year, and regularly hires professional institutions to conduct water balance testing experiments in the factory and issue water balance testing reports. Based on this report, relevant equipment is transformed and upgraded.

Management:

Linglong Tire Water Conservation Working Group is responsible for water resource management, developing annual water conservation plans, regularly carrying out water conservation management issues, and continuously improving the water responsibility system assessment and rewards.

Commitment transparency:

Linglong Tire maintains transparency in its water resource related policies, water intake, water use, and drainage indicators. It prepares an annual water use summary report and discloses it in the annual Sustainability Report.
